# Flow !

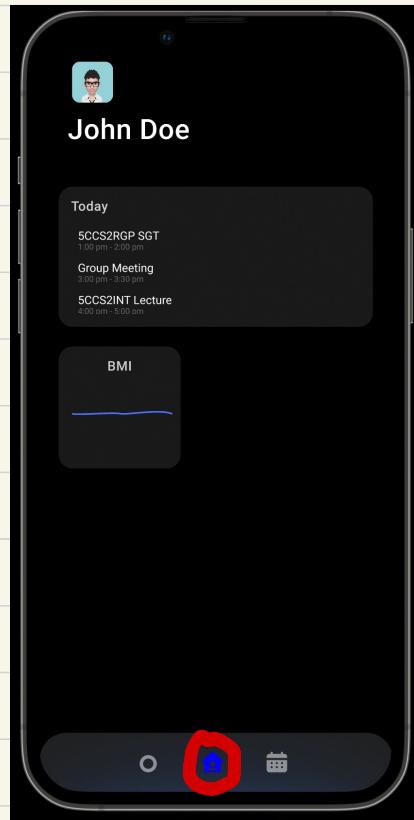

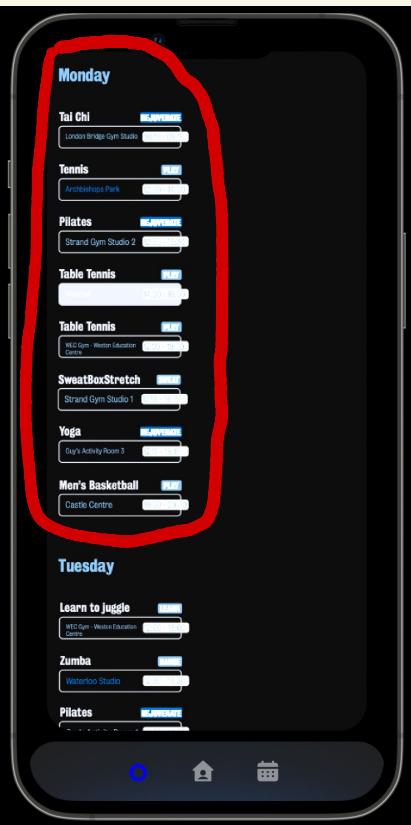

When users press play button in browser, this flow will be shown first before the main flow, which is probably what we don't want them to see ?

- It would have been nice to think about how do we make it easy for people to click "Date" and "Time" by allowing users to fill in numbers.
- The buttons "Cancel" and "Save" are both unclickable.

- Thinking about what would it practically mean to fill out these events is something we can still potentially add.

- The homepage is a bit confusing for users as it doesn't really show anything.

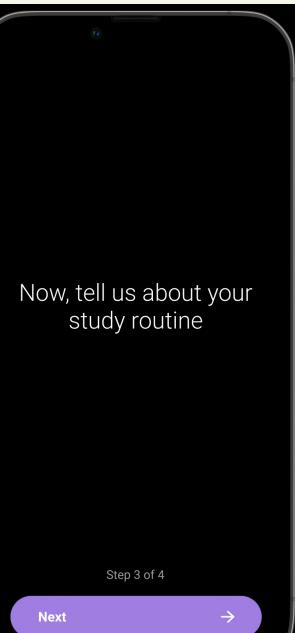

- The users can't really do anything for it apart from scrolling the page up and down.
- Can users probably take them and add to their calendar? If yes, it seems like there are too many things to do for one person.

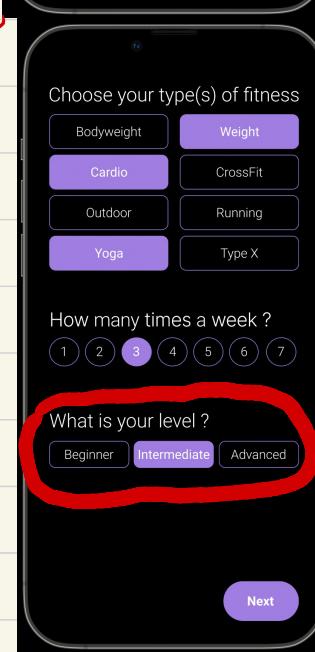

# Main Flow :

• Do you want to do a second thing, like how would you like to spend your week? ⇒ Right after setting goals, which will be really nice to add a single screen here.

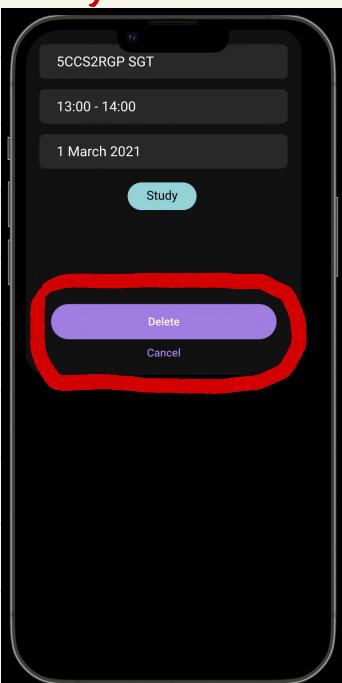

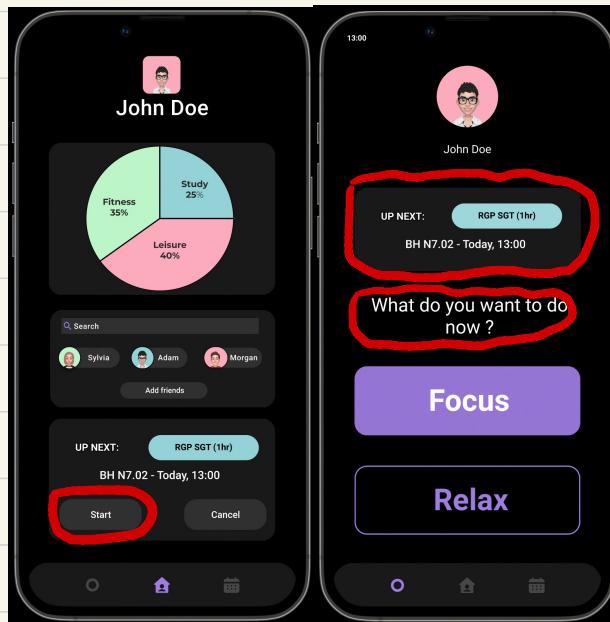

• The "level" might not be obvious to people what that means.

• When the users click "Start", it still tells them "UP NEXT" on the following page and ask them "What do you want to do now?", which seems to be break in the flow a little bit.

Petr seems to be confused about the "Concentration Enforcement Tool" part and completely skipped it, how to remove these ambiguities is exactly what we're supposed to do next.

• The buttons "Delete" and "Cancel" are both unclickable.

# Overall

- Some of the things that aren't entirely clear to the users :
  - How does the comparison really look like ?
  - How do the users show what they've done ?
    - ↳ Have/Haven't the users done any activities, especially for those activities that are happening outside of the app ?
  - What happens if I am trying to compare myself over the week ?
- What does the app have achieved so far :
  - It's sufficiently complete to address our questions and the assumptions we have specified.
  - Choices for main functionality are pretty well-described.
- Something more interesting stuff isn't really there yet yet.
